

HSTU GPU-time sunburst — jagged runs, exposed accounting, fastest step (upstream PERF\_ANALYSIS §2.2 method)  
inner ring = grouping · outer ring = leaves · % of the step

Our H100 · step 153 · D256 (jagged)

Our GB300 · step 155 · D128 (jagged)

HSTU = hstu fwd/bwd    PROJ = gemm / projection    ELEM = elementwise    N-E = nccl (exposed)    IDLE = GPU idle    OVL = overlapped  
UVQK = gemm / uvqk    G-O = gemm / others    EMB = embedding op    N-O = nccl (overlap)    OTH = others
